

INTERNSHIP PRESENTATION

HTML & CSS Responsive Landing Page

A concise academic presentation of the internship work completed with HTML5, CSS3 and Vanilla JavaScript.

INTERNSHIP DURATION **26 August 2026 – 10 September 2026**

STUDENT CREDENTIALS

Nitin Kumar

Roll No. 25SCS1003003287

B.Tech – Computer Science & Engineering

JUST INTERNSHIP

Certificate ID: JI-2026-000018

IILM University, Greater Noida

Student & Internship Overview

Candidate Details

Student Name: Nitin Kumar

Roll Number: 25SCS1003003287

Degree: B.Tech – Computer Science & Engineering

Batch: 2035-2029

University: IILM University, Greater Noida

Internship Profile

Organization: Just Internship

Internship: HTML & CSS Responsive Landing Page

Duration: 26 August 2026 – 10 September 2026

Certificate ID: JI-2026-000018

HTML5

CSS3

Vanilla JavaScript

Internship Objectives

01

Semantic Structure

Use clean HTML5 semantics to create a clear, organized page foundation.

INTERNSHIP TARGET

Practical front-end workflow

02

Visual System

Build a consistent theme, typography, spacing and reusable CSS patterns.

INTERNSHIP TARGET

Practical front-end workflow

03

Responsive Layout

Apply Flexbox and Grid so the landing page adapts across screen sizes.

INTERNSHIP TARGET

Practical front-end workflow

04

Interaction & Delivery

Add lightweight JavaScript behavior, navigation flow and deployment readiness.

INTERNSHIP TARGET

Practical front-end workflow

Task 1 – Project Setup & Semantic HTML

01 Project Setup

Established the core three-file structure: index.html, styles.css and script.js. This keeps structure, presentation and behavior separated.

02 Semantic HTML

Organized the landing-page foundation with meaningful HTML5 structure so the content hierarchy remains clear and maintainable.

3-FILE FOUNDATION

index.html

Structure

styles.css

Presentation

script.js

Behavior

A simple structure makes the project easier to edit, test and present during viva.

Task 2 – CSS Theme & Styling

The styling layer focused on a clean academic visual system: spacing, cards, typography, borders and consistent emphasis.

01

Theme

Consistent color and surface hierarchy

02

Typography

Readable headings, labels and body text

03

Cards

Reusable rounded panels with light borders

04

Spacing

Balanced padding and alignment across sections

CSS3 ROLE

Controls the project's visual identity while keeping the HTML structure clean and the responsive behavior predictable.

Task 3 – Flexbox/Grid Responsiveness

RESPONSIVE LAYOUT

Flexbox + Grid

Used the two CSS layout systems to organize content into flexible rows, columns and responsive sections.

Flexible rows

Adaptive columns

Mobile-friendly

Outcome

A layout that can scale with the viewport instead of relying on fixed positioning.

LAYOUT MODEL

Desktop

Flexible

Responsive

Grid section

Flex row

The exact breakpoint values are intentionally not documented here; the emphasis is on the layout approach used in the internship task.

Task 4 – Navigation & Deployment

01 Navigation

Connected the page flow with a clear navigation structure so visitors can move between the main landing-page sections.

02 Deployment Readiness

Kept the implementation lightweight—HTML5, CSS3 and Vanilla JavaScript only—so the final folder remains simple to host and share.

DELIVERY FLOW

Final Project – NOVA ONE Landing Page

A focused landing-page implementation bringing the internship tasks together in one concise front-end project.

Technologies & 3-file Architecture

The project intentionally uses only three front-end technologies, keeping the implementation transparent for academic review and viva.

Testing & Validation

Validation centered on the user-visible behavior expected from a responsive landing page.

01

Layout

Desktop and mobile-friendly behavior was considered through responsive CSS.

02

Navigation

Links and page flow were checked for a predictable user journey.

03

Styling

Spacing, typography, borders and card consistency were reviewed.

04

Files

The three-file HTML/CSS/JS structure was kept organized and easy to inspect.

Validation goal: a clean, consistent and presentation-ready landing page built with only the stated technologies.

Skills & Learning Outcomes

Technical Takeaways

- | | | |
|----|-----------------------|---|
| 01 | HTML5 | Semantic page structure |
| 02 | CSS3 | Theme, spacing and responsive styling |
| 03 | Flexbox / Grid | Adaptive layout organization |
| 04 | JavaScript | Lightweight client-side interaction |
| 05 | Debugging | Reviewing and validating front-end behavior |

Learning Outcomes

- Translate a design idea into clean front-end structure.
- Keep style rules reusable and visually consistent.
- Think about responsive behavior before finalizing layout.
- Present a compact project architecture clearly in viva.

Internship / Certificate Verification

Official Record

Internship	HTML & CSS Responsive Landing Page
Organization	Just Internship
Duration	26 August 2026 – 10 September 2026
Certificate ID	JI-2026-000018
Candidate	Nitin Kumar
